I design APIs, realtime systems and the infrastructure under them with Spring Boot, NestJS and Node, build the clients in Angular and Flutter, and take them to production with Docker and CI/CD. Part-time at Sarıtaş Bilişim, where I cut AI-agent latency by up to 70%; founder of EngerekTech, where I build and run products end to end.

EXPERIENCE

Founder & Software Engineer · EngerekTech 2026 – Present · Antalya

- Built and run KPSS Düello, a realtime quiz-duel app with server-verified scoring, matchmaking, leagues and in-app purchases (Flutter, Firebase, Cloud Functions).
- Built the company platform: Angular SSR site and blog, Spring Boot API and an internal portal, shipped as containers through GitHub Actions to a self-managed Linux server.
- Automated content with the Claude API: sourced blog drafts with an SEO check, automatic English translations and release notes written for testers.
- Set up and operate company email (Mailu, Postfix, Rspamd) with SPF, DKIM and DMARC.

Part-Time Software Developer · Sarıtaş Bilişim A.Ş. Oct 2025 – Present · Antalya

- Cut latency and compute usage of AI-agent services by up to 70% through profiling and targeted refactoring.
- Optimized system-to-system API workflows to reduce platform load and improve real-time responsiveness.
- Mentored a 7-person internship team over a 1.5-month program.
- Improved error handling, architecture consistency and execution stability across services.

Software Developer Intern · Sarıtaş Bilişim A.Ş. Jul 2025 – Aug 2025 · Antalya

- Worked on backend services in production, improving real-time streaming and service-to-service integration.
- Supported containerized deployment and CI/CD with Docker, Kubernetes and GitLab CI.
- Implemented authentication with Spring Security and Azure OAuth.
- Contributed retrieval, memory and tool-execution features to the AI assistant.

Backend Developer · Burdur Mehmet Akif Ersoy University Mar 2025 – Jun 2025 · Burdur

- Led backend development of the internship automation platform, coordinating 12 developers.
- Designed and implemented the REST APIs behind the application's workflows.
- Worked with the frontend team and stakeholders to ship stable releases on time.

Freelance Software Developer · Kritm Bilişim Jan 2025 – Apr 2025 · Antalya

- Delivered client projects end to end, from requirements to maintainable software.
- Built component-driven interfaces in Angular and backend services with Django REST APIs.
- Automated Excel-to-SQL data cleaning and migration with Python for reporting.

SELECTED PROJECTS

KPSS Düello · Realtime quiz duels with server-verified scoring 2026 · Closed testing on Google Play

- Server-authoritative scoring: clients send only their picks and server timestamps; Cloud Functions decide correctness and speed points.
- Matchmaking queue with transactional claims, so concurrent players never land in two rooms.

Flutter · Dart · Firebase Realtime DB · Firestore · Cloud Functions · Node.js · Pub/Sub · GitHub Actions —
yunusemresenyigit.dev/work/kpss-duello

- Angular with server-side rendering in front of a Spring Boot API and PostgreSQL, deployed as containers by GitHub Actions.
- Turkish and English pages with hreflang, sitemap, RSS and llms.txt; blog posts are translated to English automatically.

Angular SSR · Spring Boot · Java 25 · PostgreSQL · Docker · GitHub Actions · nginx · Claude API — yunusemresenyigit.dev/work/engerektech-platform

- Sentence-first cards: tap to see the meaning, swipe to mark it known or to review.
- A review jar with a simple spaced-repetition rule: three correct answers take a word out.

Flutter · Dart · Firebase Cloud Messaging · Android — yunusemresenyigit.dev/work/kelime-kavanozu

ENGEREK (TEKNOFEST 2026 · Team Captain, 2026) — Autonomous air-defense system: real-time target detection and tracking on NVIDIA Jetson, driving microcontroller actuation with millisecond-level response.

Real-time gauze tracking (TÜBİTAK 2209-B, 2026) — Detects and tracks surgical gauze in real time to reduce manual counting errors during operations.

Code Kiddo (TEKNOFEST · Semi-finalist, 2025) — AI-assisted coding education platform for children, from concept to prototype.

SosyalizBiz (Gençlik Hackathonu, 2025) — Event discovery and social platform with Google sign-in, filters, location navigation and email reminders, delivered as a working MVP.

Fungify (TÜBİTAK 2209-B, 2024) — Flutter app that classifies images through a Spring Boot API calling a Python model.

Buyer (Open source, 2024) — E-commerce backend with a domain-oriented structure, JWT authentication and consistent API responses.

SKILLS

Languages	Java, TypeScript, Dart, Python, SQL
Backend	Spring Boot, Spring Security, NestJS, Node.js, REST, GraphQL, Django
Web & mobile	Angular, React, Next.js, Flutter
Data	PostgreSQL, MongoDB, Firestore, Firebase Realtime DB, Flyway
Infrastructure	Docker, Kubernetes, GitHub Actions, GitLab CI, nginx, Linux, Sentry
AI	LLM integration, Claude API, RAG, MCP, Agent tooling

EDUCATION

B.Sc. Software Engineering
Burdur Mehmet Akif Ersoy University
2023 – present · GPA 3.06 / 4.00

LANGUAGES

Turkish (Native), English (B1)
